Keolis deploys SaaS solutions on electric bus fleet in Bergen, Norway

Keolis Norway (Keolis) has implemented cloud-based INIT Software-as-a-Service (SaaS) solutions to monitor and charge its electric bus fleet in Bergen.

The SaaS project combines software from several INIT Group companies. INIT's LIVErtpi will be used for real-time traffic monitoring and MOBILEcharge will be used for the management of the charging process. The contract for the solutions includes hosting of the software as well as constant updates and guarantees for smooth operation for the next ten years.

Keolis's electric bus fleet in Bergen is one of the largest renewable-energy fleets in Northern Europe, with 112 electric buses.
